

CDFA Project Spotlight

Delivering Significant Energy Savings to New Hampshire Municipalities

In 2016 as part of the “Franklin Goes Green” initiative, the City of Franklin completed a municipal streetlight conversion project. The city replaced nearly 500 streetlights with energy efficient LED fixtures which will save Franklin \$31,000 annually in electricity costs.

The City of Franklin financed the project with a \$165,200 loan through CDFA’s Clean Energy Fund. The financial assistance provided by the Clean Energy Fund also enabled the city to leverage \$49,800 in rebates from the New Hampshire Public Utilities Commission.

In addition to reducing Franklin’s streetlight bill by half as a result energy savings, the new LED fixtures provide a vast improvement in streetlight quality, with a more focused lighting solution which reduces light pollution. The new LED fixtures have an expected life of at least 20 years and Franklin plans to divert the energy savings into other much needed municipal projects.
