

CDFA Clean Energy Fund Project Spotlight

Historic Mill Embraces Solar Energy

Located on the banks of the Salmon Falls River in Rollinsford, New Hampshire, the historic Salmon Falls Mills have undergone a true transformation. Originally constructed in the 1820's for water-powered textile manufacturing, the Mills are now home to a thriving local arts community. Today, more than 100 artists utilize the commercial space for painting, woodworking, dance, and much more.

With the help of a loan from CDFA's Clean Energy Fund, the Mills have been powered by nearly 500 solar panels since November 2015. In addition to saving an estimated \$6,000 in energy costs over the next five years, the solar installation will reduce the Mill's carbon footprint by 25 tons of carbon dioxide each year.
